

Blinkit Sales Analysis Report

1. Introduction

This report presents a detailed analysis of Blinkit's sales data. The focus is on cleaning the dataset, exploring sales trends, and identifying performance patterns across outlets and product categories.

2. Data Cleaning

- Missing Values:
 - The column `Item Weight` had missing values, which were filled using the mean value.
- Standardization:
 - Inconsistent values in `Item Fat Content` (like LF, low fat, reg) were cleaned and converted to:
 - Low Fat
 - Regular
- Post-cleaning Check:
 - Verified that null values were successfully handled.
 - Ensured consistency across categorical columns.

3. Business Requirements / KPI Analysis

☒ KPI 1: Total Sale by Fat Content

- Compares total sales between Low Fat and Regular items.
- Helps understand consumer health-based preferences.

☒ KPI 2: Total Sale by Item Type

- Shows which product categories (like dairy, snacks, canned food) drive the highest sales.

☒ KPI 3: Fat Content by Outlet

- Analysis of sales per outlet split by Fat Content.
- Helps optimize product distribution by outlet.

☒ KPI 4: Total Sale by Outlet Establishment Year

- Compares performance based on how long an outlet has been running.
- Older outlets may show more stable or declining performance.

☒ KPI 5: Total Sales by Outlet Size

- Large-sized outlets generally show higher sales volume.
- Suggests investment focus on medium and large outlets.

☒ KPI 6: Total Sale by Outlet Location

- Urban, semi-urban, and rural (Tier 3) sales were compared.
- Urban areas likely lead in sales performance.
